

Product Requirement Document

ProcessSafety

ProcessSafety is a industrial workflow management application designed to streamline tasks and enhance productivity through a user-friendly interface and advanced template creation tools. The app aims to simplify complex workflows and provide AI-driven assistance to users.

How?

ProcessSafety offers a centralised hub for managing tasks, modules and actionable items. It features a multi-step template creator that allows users to build complex templates easily. The app also integrates AI-driven assistance to handle intricate details, ensuring users stay focused on their workflow.

Feature Streams

- | Incident Reporting and action Management
- | Inspections and Audit Management
- | Actionables with Status and Time Indicators
- | Tag Details and Question/Compliance Options
- | AI-Driven Copilot for Complex Tasks
- | Streamlined Interface for Task Management
- | Clarity and Simplicity in Workflow Management

Business Context

ProcessSafety benefits users by simplifying their workflows and enhancing productivity. For businesses, it can lead to improved task management, reduced errors and increased efficiency.

Success Criteria

- Increased user productivity and task completion rates.
- Positive user feedback on the simplicity and effectiveness of the template creator.
- Achievement of targeted user adoption and retention rates.
- Reduction in user-reported errors and workflow complexities.

Objectives and Goals

There is a demand for workflow management solutions that can handle complexity while remaining user-friendly. ProcessSafety meets this need by offering a platform that simplifies task management and provides AI-driven support.

- Enhance user productivity through streamlined workflow management.
- Simplify complex task creation with advanced template tools.
- Provide AI-driven assistance to handle intricate workflow details.
